

Process II Deliverable

Project: Discord Focus Bot

Team Name: The Discordians

Team Members: Shreya Aravindan, Justin Turkiewicz, Geethika Abhilash, John Byman, Sheril George and Arav Tripathi

Scrum Meeting Notes

In our meeting we discussed how our tasks are progressing for the discord bot project.

Shreya Aravindan

I designed a sketch of the git notifications sent by the discord bot. I worked with the team to understand the expectations of how the notifications should look and their functionalities.

Justin Turkiewicz

I designed a sketch of the task board feature's look and feel when displayed on the discord channel. I talked with other team members about the design and adjusted based on their feedback. I then implemented the ability to create and delete the task board. I will be working on customization features to the task board design, color and text modifications such as font size and font color.

Geethika Abhilash

I contributed to the set reminders portion of the wireframe. I will be working on the low-level design part of the project next

John Byman

I am working on the mock user interface section for the project, helping to add in the rationale sections and helping with the story boards.

Sheril George

I am working on the low-level design part of the project, adding in the pseudocode for the pomodoro alerts.

Arav Tripathi

I am working on writing the rationale for the storyboard, to give more context to the UI and the features.
